SPAN 500 ladderframe

Zip-Up Span 500 ladderframe is a new, highly adaptable, fastrack tower system featuring 500mm rung spacing.

Zip-Up Span 500 ladderframe towers can be constructed in 0.5m increments and do not need separate guardrails, giving greater flexibility and less inventory to stock.

The Z-configuration bracing enables quick, trouble-free assembly while providing a very rigid structure.

Zip-Up Span 500 ladderframe is available in narrow 0.82m and wide 1.43m and lengths of 2m, 2.5m and 3m which are compatible with other Span systems to ensure maximum functionality for each location.

Span 500 ladderframe towers can be set up in minutes.

Rib-Grip cold formed joints

The cold-formed Rib-Grip jointing process is a key feature of the Access Tower Systems and gives greater strength and durability than traditional welded types.

Span 500 ladderframe features 500mm rung spacing, large platform areas and integral ladder side frames.

Span 500 ladderframe is fully compatible with other Span towers, walkways and accessories.
